Description	A copper blind fastener with a self-contained steel mandrel which is otherwise designed identically to an aluminum rivet with a steel mandrel. The head of the rivet body is slightly rounded and twice as wide as the body diameter.
Applications/ Advantages	Dome head is the only head style in which the copper rivet is offered. Copper rivets are not subject to tensile or shear strength testing, but meet the same mandrel break-load standards as aluminum rivets with steel mandrels. Copper is the most malleable of the various rivet metals. It has a higher electrical conductivity than any of the other rivet metals which make it useful in many electrical applications. They should be used when fastening materials with mechanical and physical properties similar to copper.
Material	<i>Rivet:</i> Copper Alloy No. 110. <i>Mandrel:</i> Carbon steel 1006 or equivalent, copper plated.
Shear Strength	Copper rivets are not subject to shear testing (SAE J1200).
Tensile Strength	Copper rivets are not subject to tensile testing (SAE J1200).
Mandrel Break Load	While the rivet is being set, the axially applied load necessary to break the mandrel shall be within 600 lbs. max, and 400 lbs. min.

Notes on Rivet Selection

Strength- The tensile and shear strengths required for an application must be determined and a rivet selected that meets those requirements.

Materials- Choose a rivet that is made of a metal with similar mechanical and physical properties as the materials being joined. This is especially critical in assemblies where higher temperatures and/or corrosive elements are present. Metal compatibility helps reduce the risks of galvanic corrosion and material fatigue.

Grip Range- Measure the total thickness of the materials being fastened. This is known as the "rivet grip". The grip ranges of the most commonly available rivets are listed in the table below. Sufficient rivet length is necessary for proper formation of the secondary head on the blind side of the assembly. Multi-grip rivets have wider grip ranges than standard break-stem blind rivets.
