Description	A thread cutting screw with machine screw thread pitch, blunt point, tapered entering threads and multiple cutting edges.						
Applications/ Advantages	Steel thread-cutters are used in heavy gauge sheet metal, aluminum, zinc and lead die castings, cast iron, brass and plastic. Stainless screws offer additional resistance to corrosion, 18-8 moreso than 410. When using any thread-cutting screw, the material in which the threads are cut should have a lower hardness by at least 10 to 20 Rockwell hardness points.						
Material	Steel: AISI 1016 - 1024 or equivalent steel. Stainless: 410 martensitic stainless steel or 18-8 stainless steel.						
Heat Treatment	410 Stainless: Screws shall be annealed by heating to 1850-1950°F, held at least for 1/2 hour and rapid air- or oil-quenched then reheating to 525°F minimum for at least 1 hour and air cooled to provide the required tensile, yield and hardness properties.						
Surface Hardness	Steel: Rockwell C45 minimum						
Case Depth (steel)	No. 4 thru 6 diameter: .002007 No. 8 thru 12 diameter: .004009 1/4" diameter & larger: .005011						
Core Hardness	Steel (after tempering): Rockwell C28 - 38 410 Stainless: Rockwell C38 - 42; 18-8 Stainless: Rockwell B90 - C20						
Plating	See Appendix-A for information on plating of steel thread cutting screws.
